It is carried out research on studying correlation of achievement motivation and temporal perspective. Participants were teachers and businessmen in the age from 35 to 45 years (two groups on 10 persons). On the basis of the analysis of the literature two hypotheses are put forward: 1) motivation of achievements at businessmen above, than at teachers; 2) the below achievement motivation, the remote arrangement of motivational objects in temporal perspective. The given hypotheses are confirmed on the basis of statistical data processing about achievement motivation and temporal perspective.

Keywords: achievement motivation, motivational objects, temporal localization, temporal perspective.
